Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-3, 5-13 and 15-19 are rejected under 35 U.S.C. 102(e) as being anticipated by Reid.

Regarding claims 1-3, 5-13 and 15-19; Reid discloses a bracket system holds one or more filters in quick-attach and quick-release fashion. Bracket modules are combined in modular fashion, with tubing or other conduit between the modules, to create a "bank" of filters easily changed in number, arrangement, and flow scheme. The bracket system comprises pairs of top modules and bottom modules that capture and support the top end and bottom end of a filter. Filter inlet and outlet ports slide onto and off of cooperating tubes or ports in the bracket modules, for installation and removal of the filters onto/from the modules without tools or threaded connections. A top retaining member pivots off of its respective filter, so that the filter may be lifted up off of its respective bottom module. The bottom modules are pivotal, so that lifting the filter up from the bracket system is facilitated by allowing the filter top end to

also pivot out away from the top module. Each filter is substantially vertically and pivotally removable from the bracket system.

Allowable Subject Matter

Claims 4 and 14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The main reason for the allowance of claim 4 over art is that the prior art of record fails to describe or fairly suggest the apparatus as having all the limitations claimed as whole and including wherein the fastener is a spring clip.

The main reason for the allowance of claim 4 over art is that the prior art of record fails to describe or fairly suggest the apparatus as having all the limitations claimed as whole and including wherein said adjacent housing are sealingly fastened together only by said tubular connector and at least one spring clip without using tools.

Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Engelhard who discloses a water purification unit including an ultraviolet light.

Selbie et al. who discloses a filter cartridge manifold.

Elfes et al. who discloses a stackable filter head unit.
